

# **Gas Analysis Workshop Berlin September 7<sup>th</sup> – 8<sup>th</sup> 2017**

## **VTT's gasification gas analysis activities**

Niko Heikkinen, Hannu Vesala, Matti Reinikainen  
VTT Technical Research Centre of Finland

## Bioruukki Pilot Centre

# Bioruukki piloting ecosystem - efficiency, speed and lower risks to development with piloting and demonstrations

- **A new piloting ecosystem** for process industry scale-up and demonstrations.
- A former printing plant transformed to world scale R&D centre.
- Located close to Otaniemi campus.

**8000 m<sup>2</sup>,**  
room for  
several pilot  
units and  
laboratories

**400**  
experts for  
R&I  
development

***BIORUUKKI IS THE LARGEST OPEN  
PILOT FACILITY IN BIOECONOMY  
IN NORTHERN EUROPE***

# Bioruukki Pilot Centre - Value from integration

## THERMOCHEMICAL CONVERSION PLATFORM

Gasification and  
pyrolysis technologies  
for biofuels and  
biochemicals.  
Recycling concepts.

Full operation started  
Q3/2015

## ENERGY STORAGE PLATFORM

Storage concepts for  
solar and wind  
energy through mono  
carbon gases to  
chemicals and  
materials

Starts at Bioruukki  
2016

## BIOMASS PROCESSING PLATFORM

Innovative biomass  
processing and  
cellulose fibres for  
new biobased value  
chains

Starts at Bioruukki  
2017

## GREEN CHEMISTRY PLATFORM

Sustainable process  
chemistry and  
bioprocesses for  
biochemicals and  
tailored biobased  
hybrid materials

Starts at Bioruukki  
2018

# Bioruukki thermochemical platform started 2015

Gasification pilot plant

- Dual Fluidized-Bed steam gasification pilot
- Bench-scale CFB gasifier

Opening ceremony  
13.3.2015

*Biofuels, biochemicals,  
recycling concepts*

Pyrolysis pilot plant

- Fast Pyrolysis CFB Pilot
- Fast Pyrolysis BFB Bench-Scale
- Slow Pyrolysis batch unit

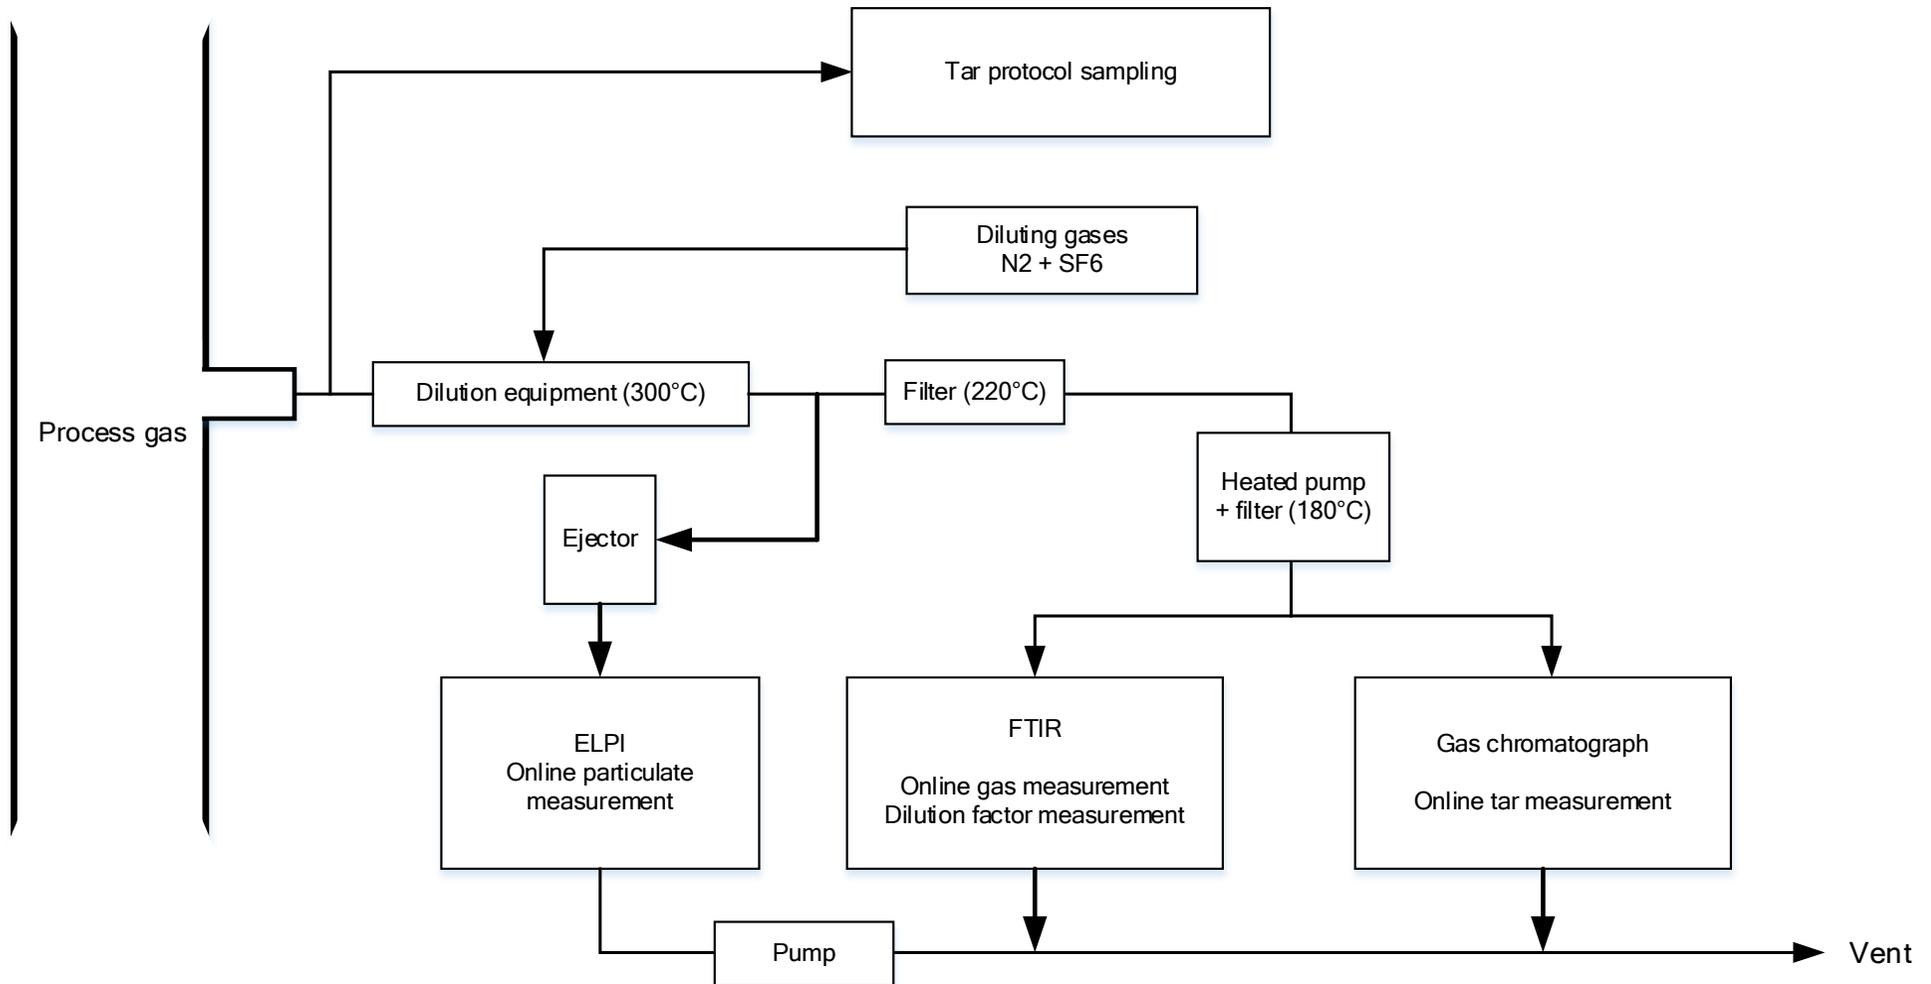

## On-line / off-line measurement campaign with dilution sampling

## Dilution sampling measurement campaign

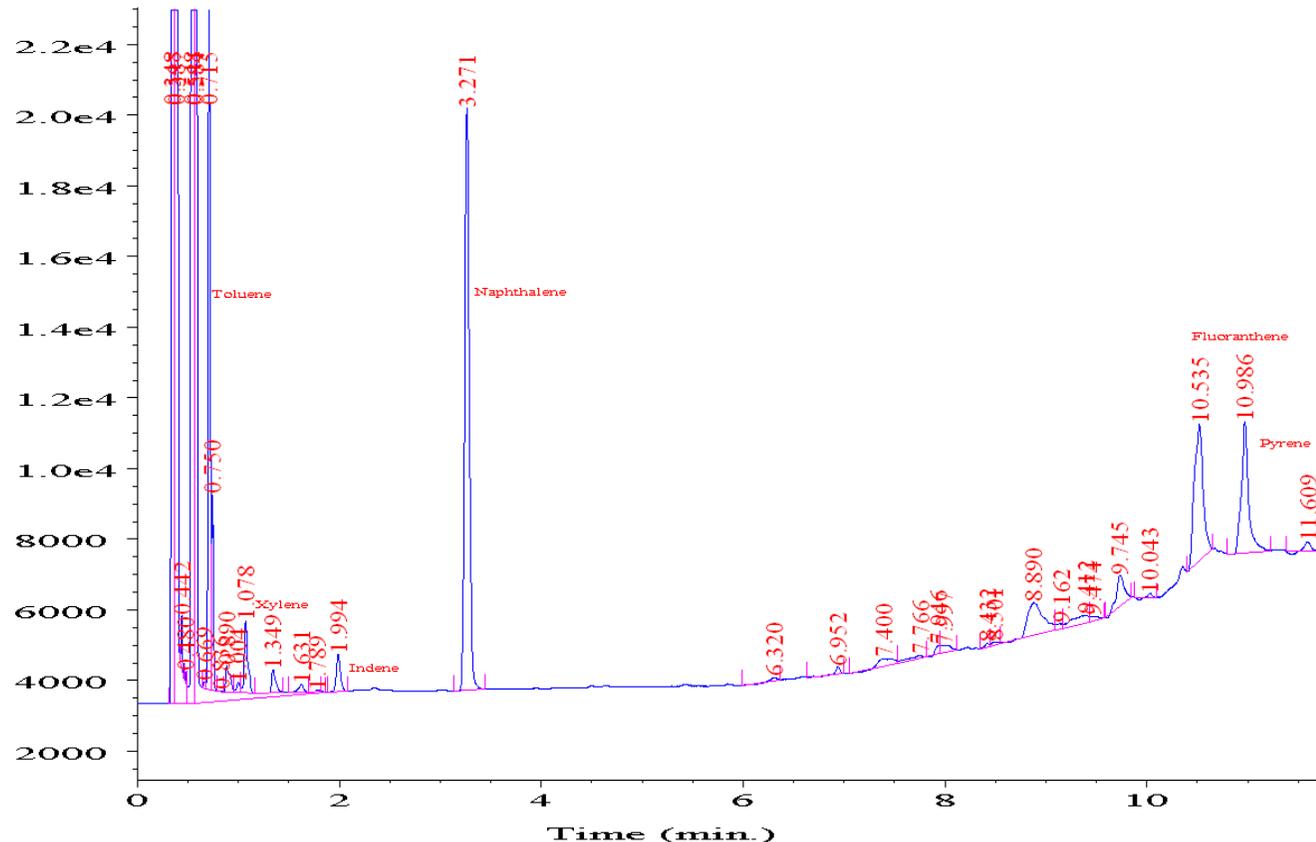

- DFB and BFB gasification processes
- 2 sample gathering locations
  - Before reformer
  - After reformer
- 3 different on-line analysis methods for:
  - Light tar compounds (GC-FID)
  - Particulates (ELPI)
  - Ammonia (FTIR)

## Dilution sampling equipment

## 'Rapid' on-line tar analysis

- Analysis time 20 min
- Calibrated compounds:
  - Benzene
  - Toluene
  - Naphthalene
  - Phenanthrene
  - Anthracene
  - Fluoranthene
  - Pyrene
  - (if desired, 20 additional compounds)
- HP-1 (10 m x 0.53 mm x 0.26 μm)  
or HP Ultra 2 –column (25 m x 0.32 mm x 0.52 μm)

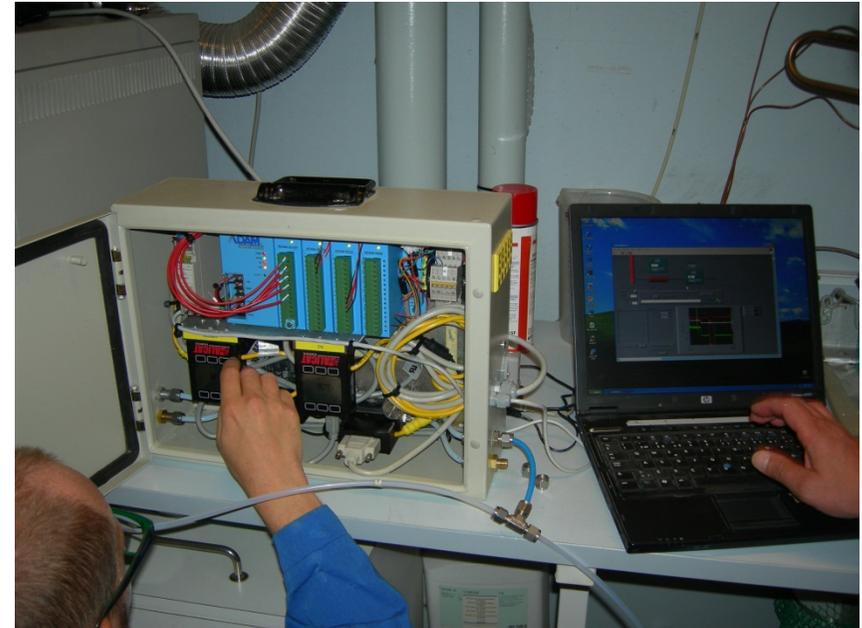

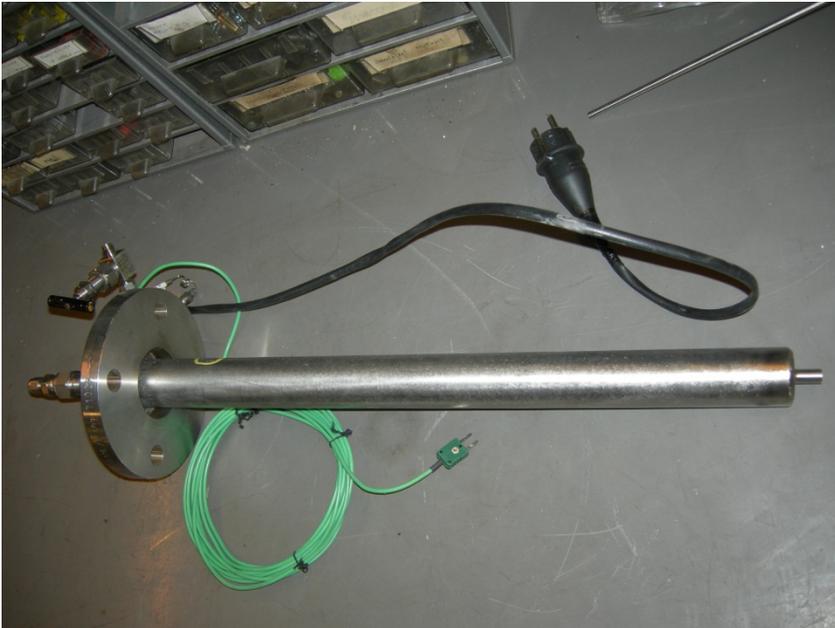

## Dilution sampling

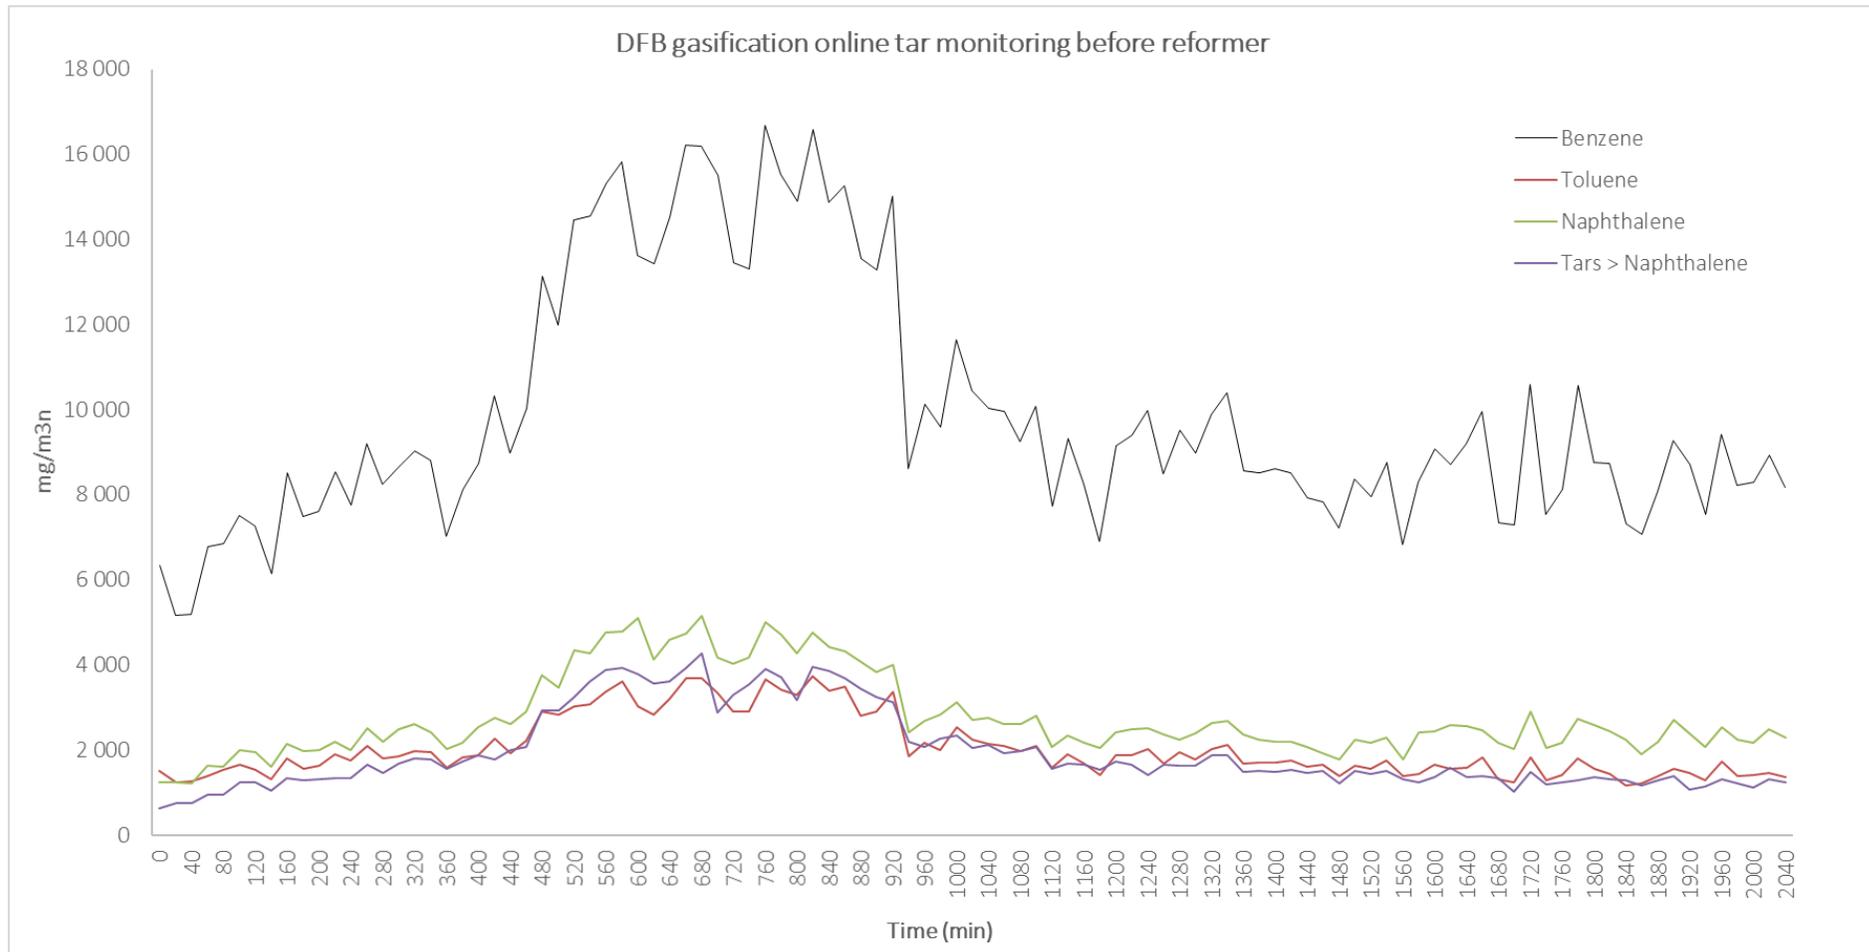

- Based on technology patented by VTT (e.g. US 8302495, FI 119450, WO/2007/080221)
- Can be applied to both atmospheric and pressurised systems
- Temperature range 280-800°C
- Dilution ratio typically 0-100
  
- Preliminary results with very tarry raw gas have been promising
  - Results consistent with controlled off-line sampling
  - No problem with condensation of tars in the sampling lines
  - Good repeatability

## Dilution sampling probe with control unit

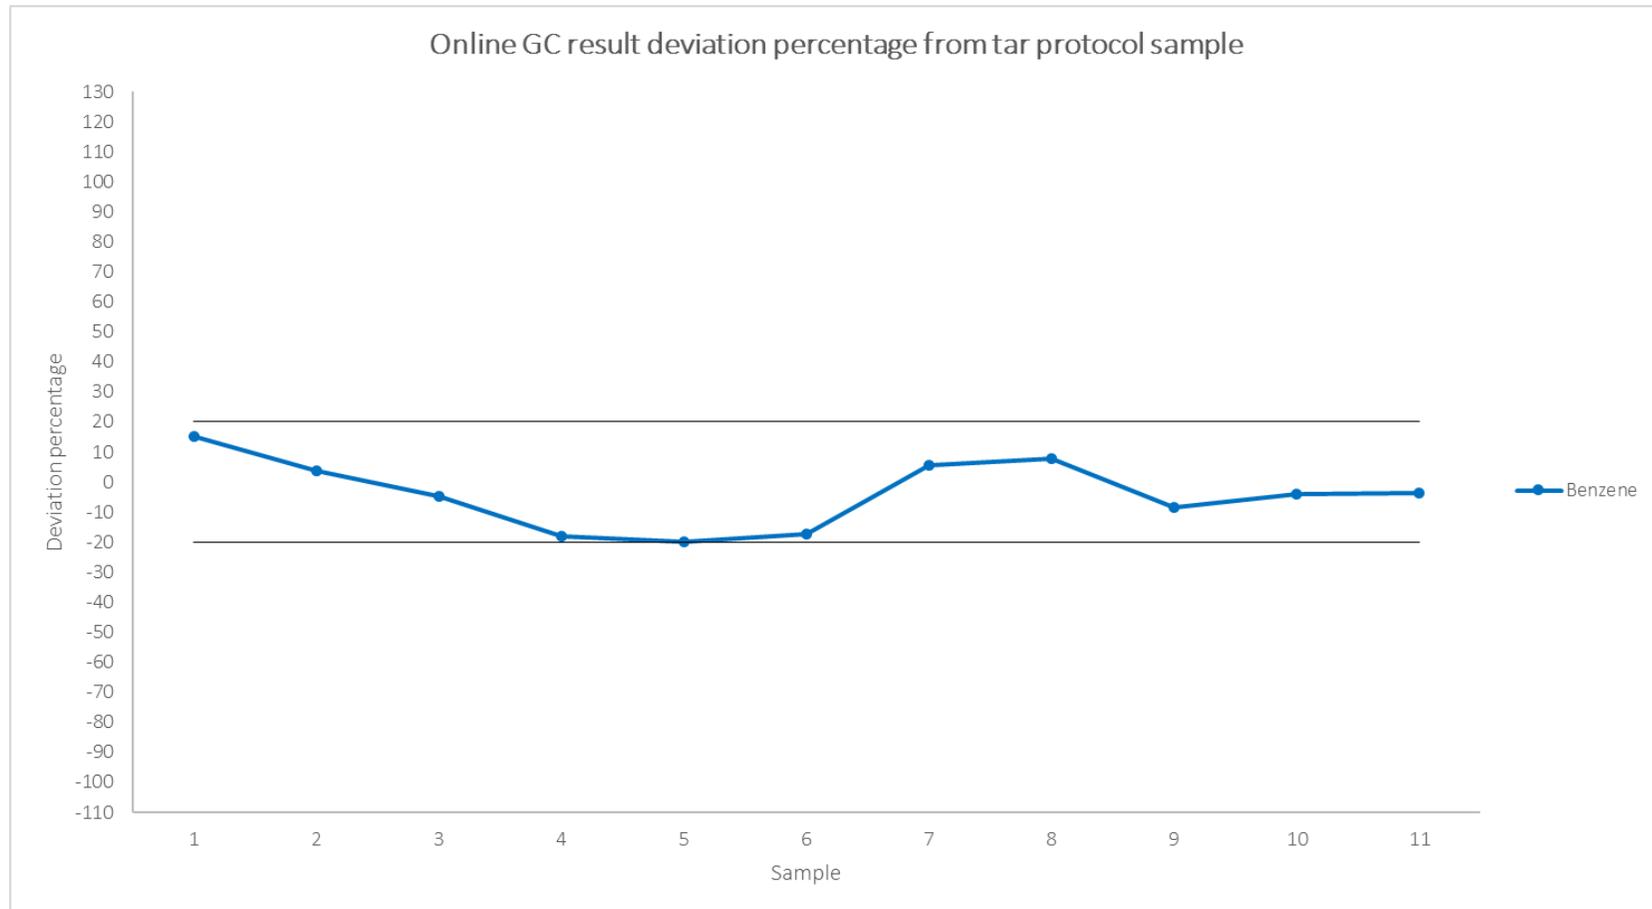

## Example of rapid tar measurement by on-line-GC

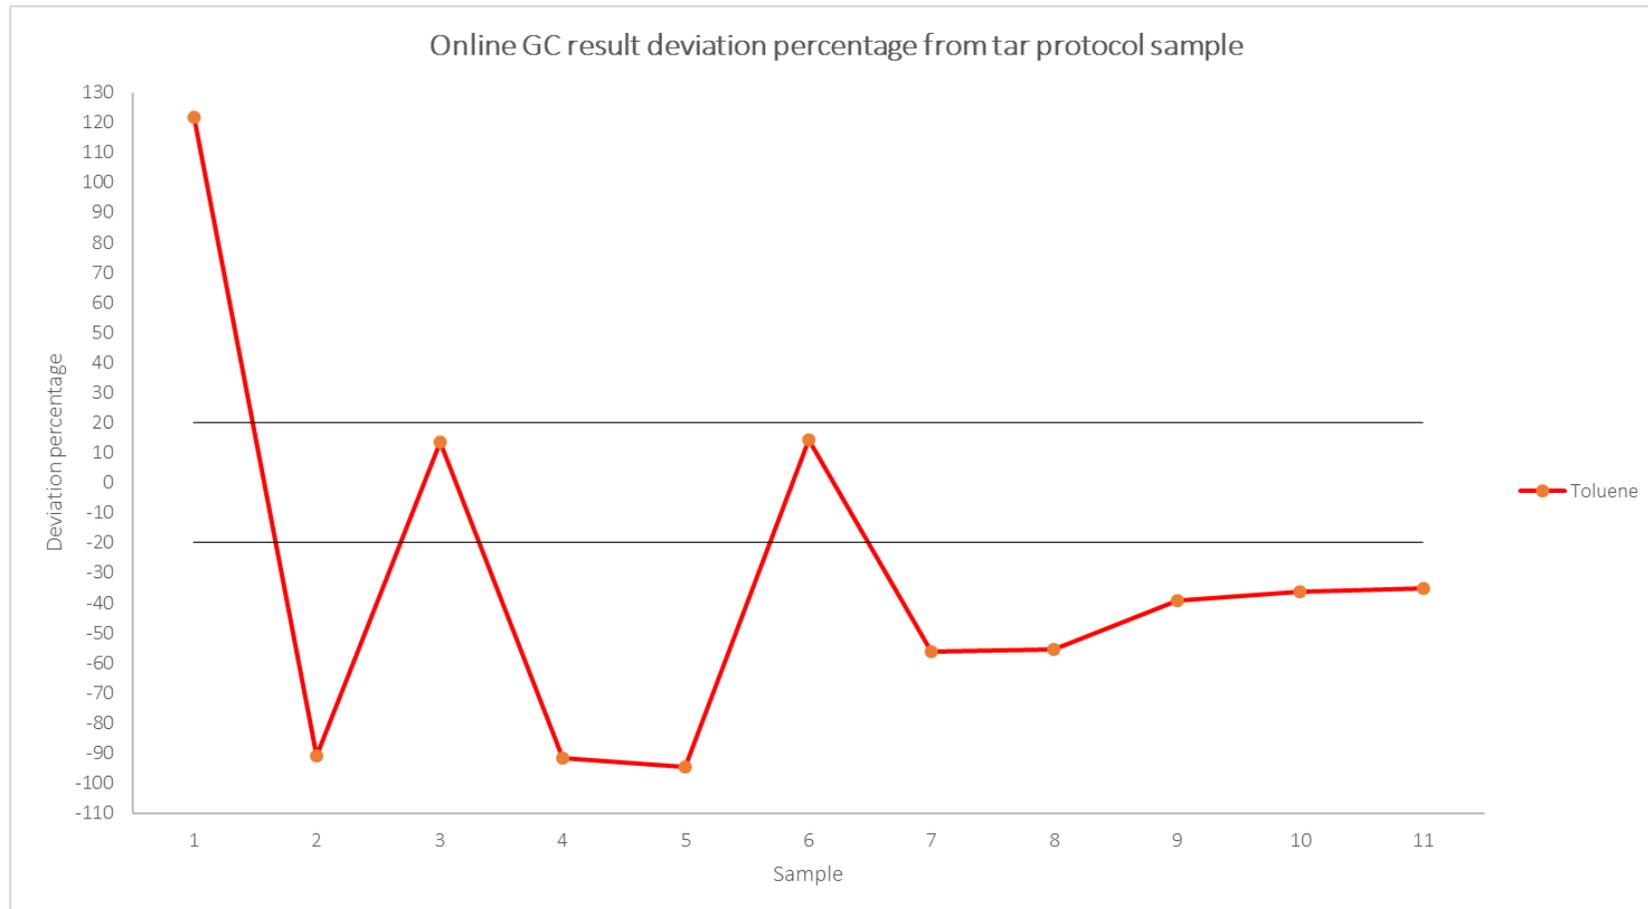

## Comparison of tar analyses by on-line (dilution) and off-line methods

Sample no.	Benzene (mg/m <sup>3</sup> n)		Toluene (mg/m <sup>3</sup> n)		Naphthalene (mg/m <sup>3</sup> n)		Tars > Naphthalene (mg/m <sup>3</sup> n)	
	Offline	Online	Offline	Online	Offline	Online	Offline	Online
1	7732	8900	36	80	1297	2553	266	294

## Comparison of tar analyses by on-line (dilution) and off-line methods

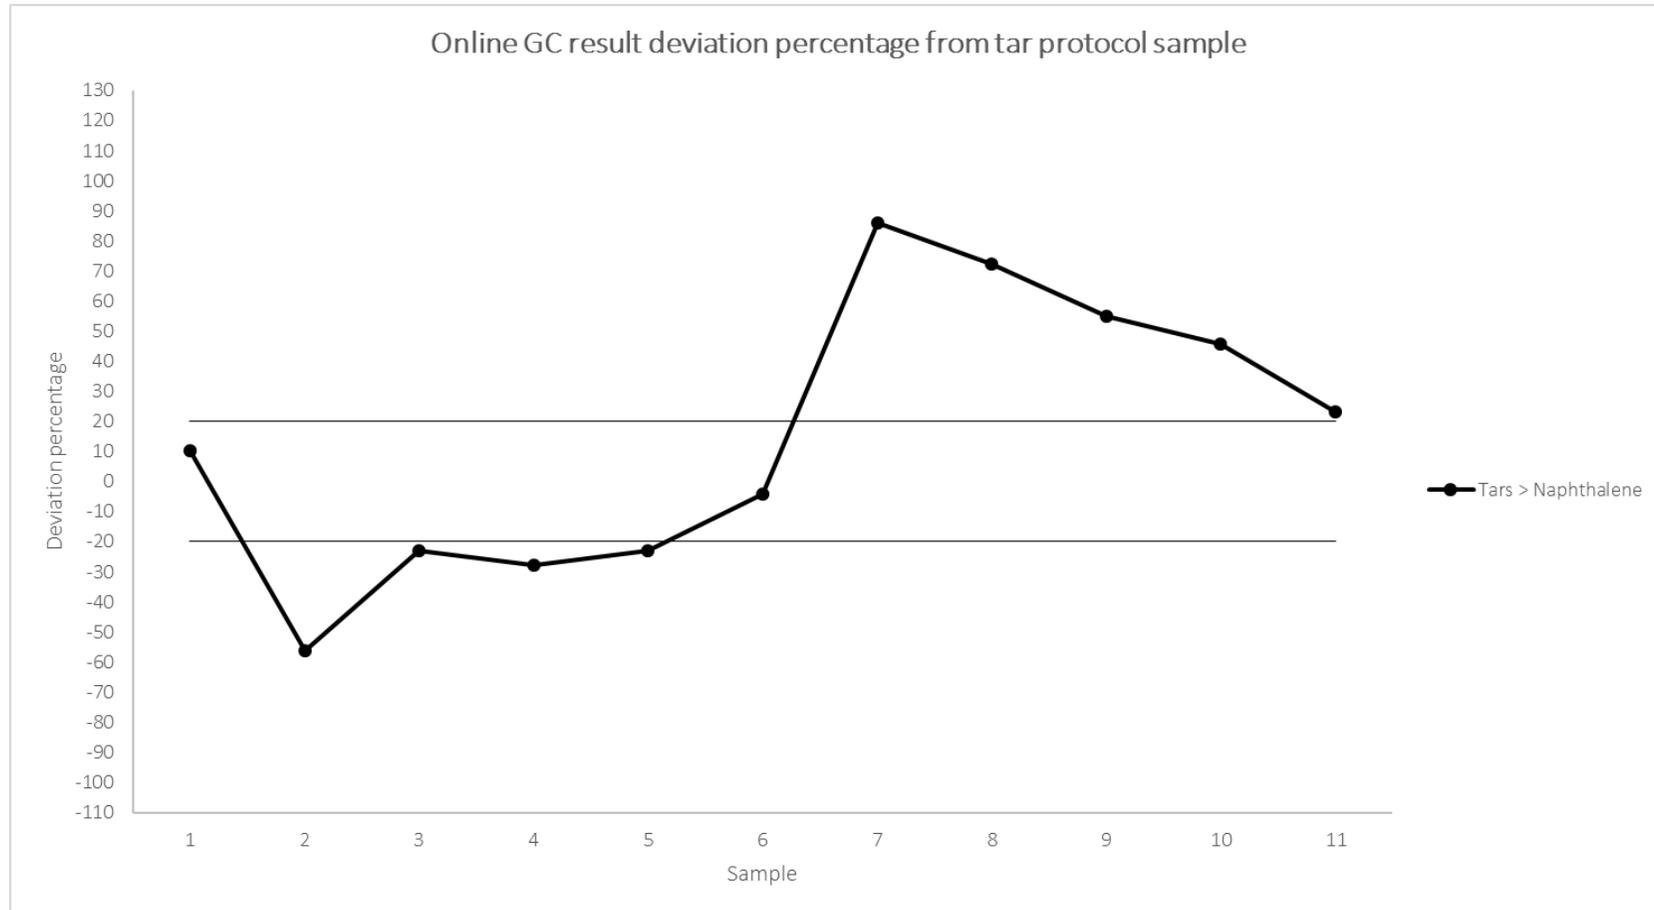

## Comparison of tar analyses by on-line (dilution) and off-line methods

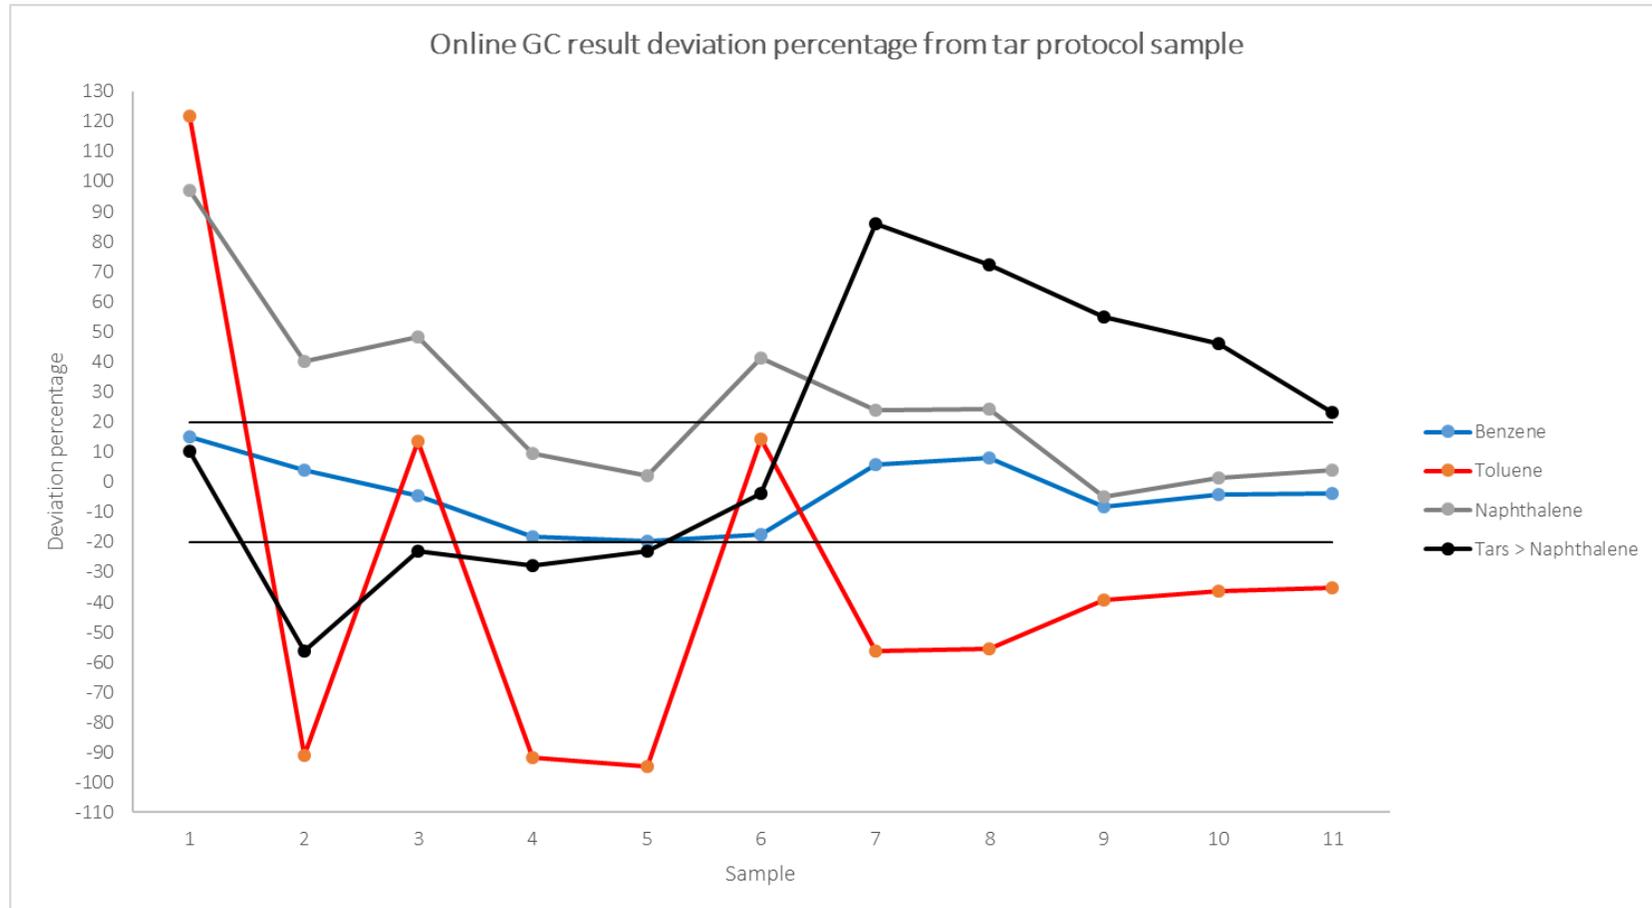

## Comparison of tar analyses by on-line (dilution) and off-line methods

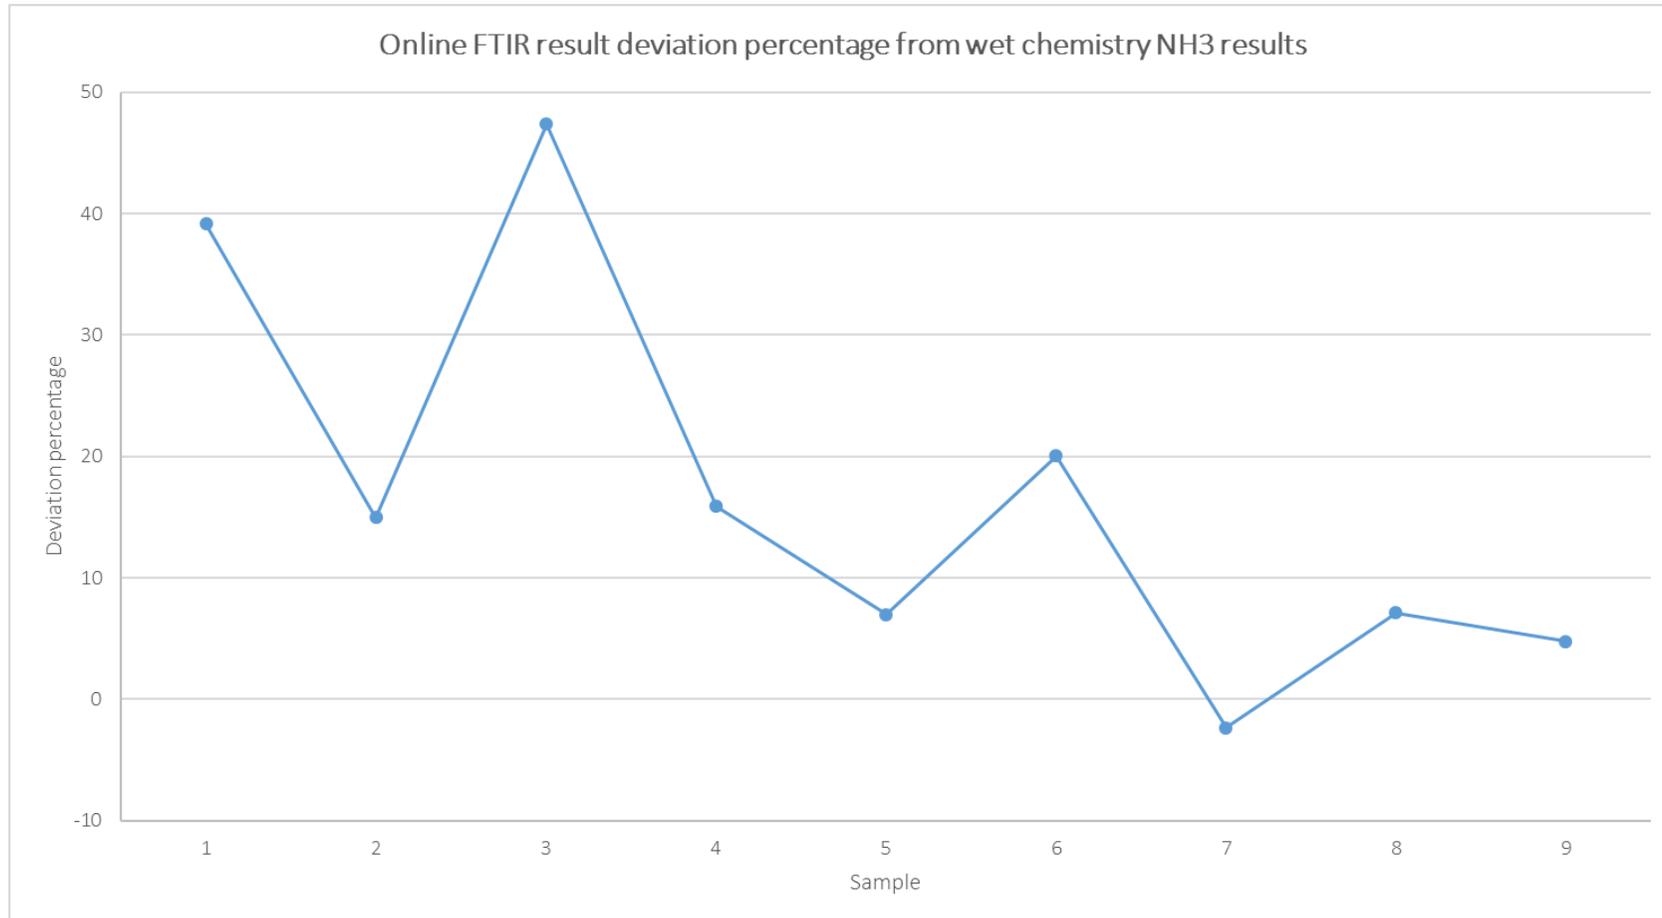

## Comparison of tar analyses by on-line (dilution) and off-line methods

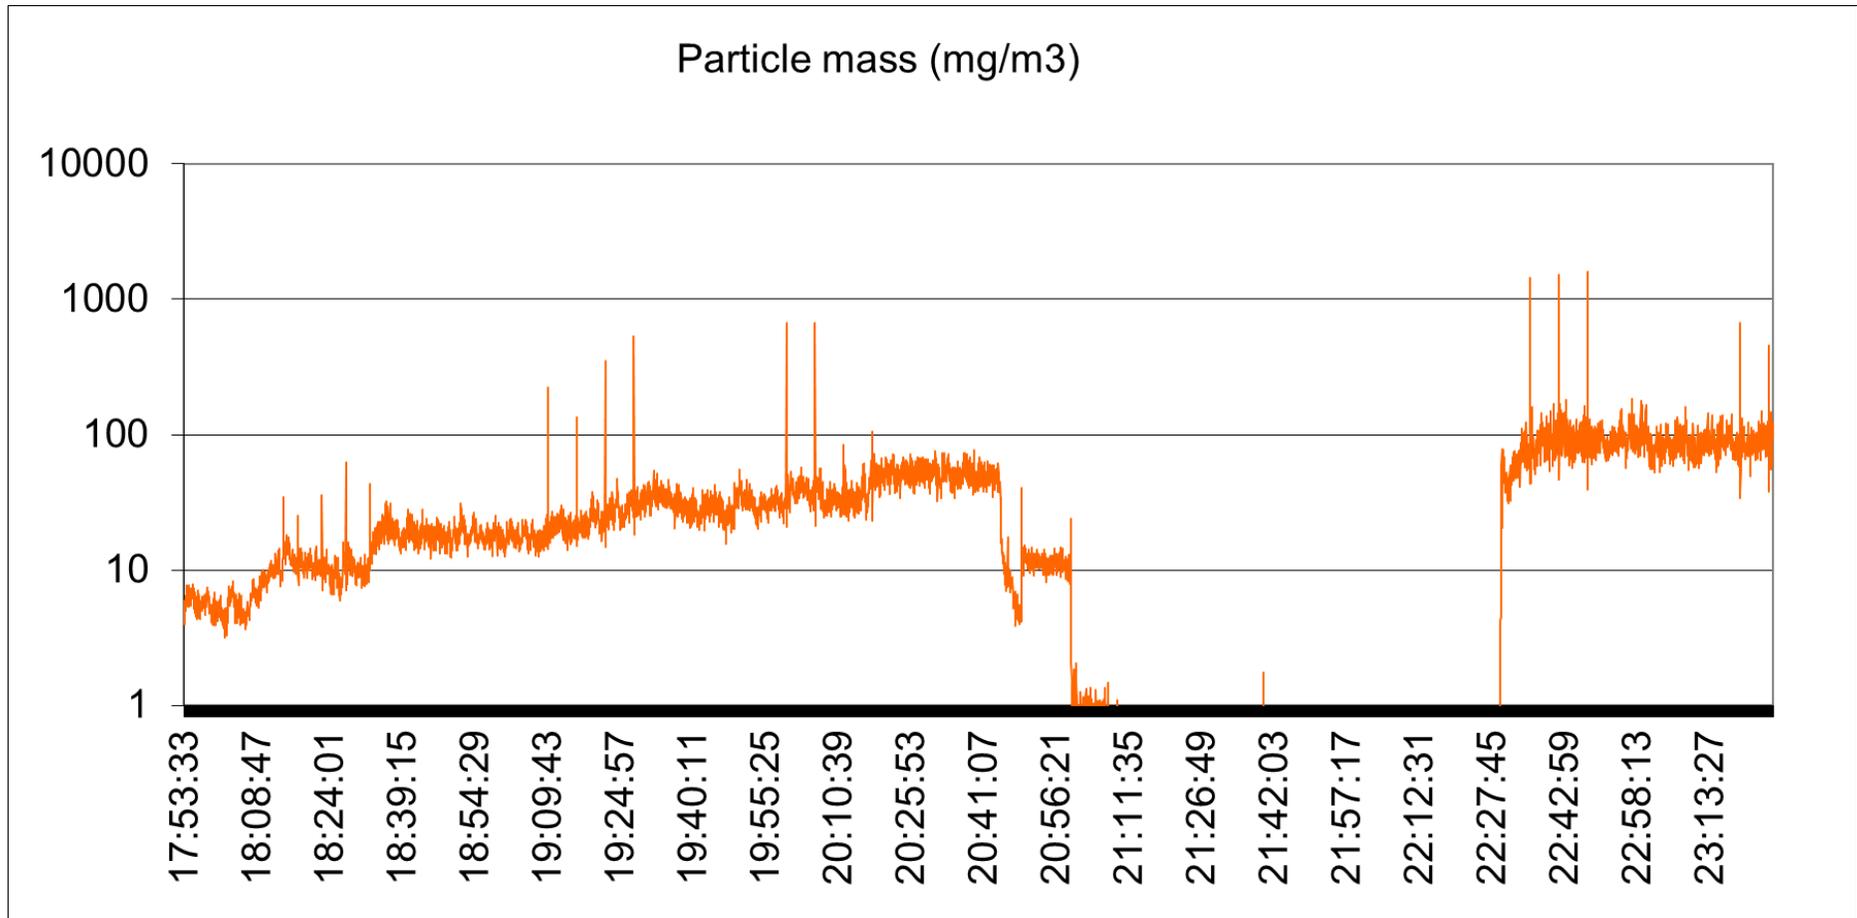

## Comparison of tar analyses by on-line (dilution) and off-line methods

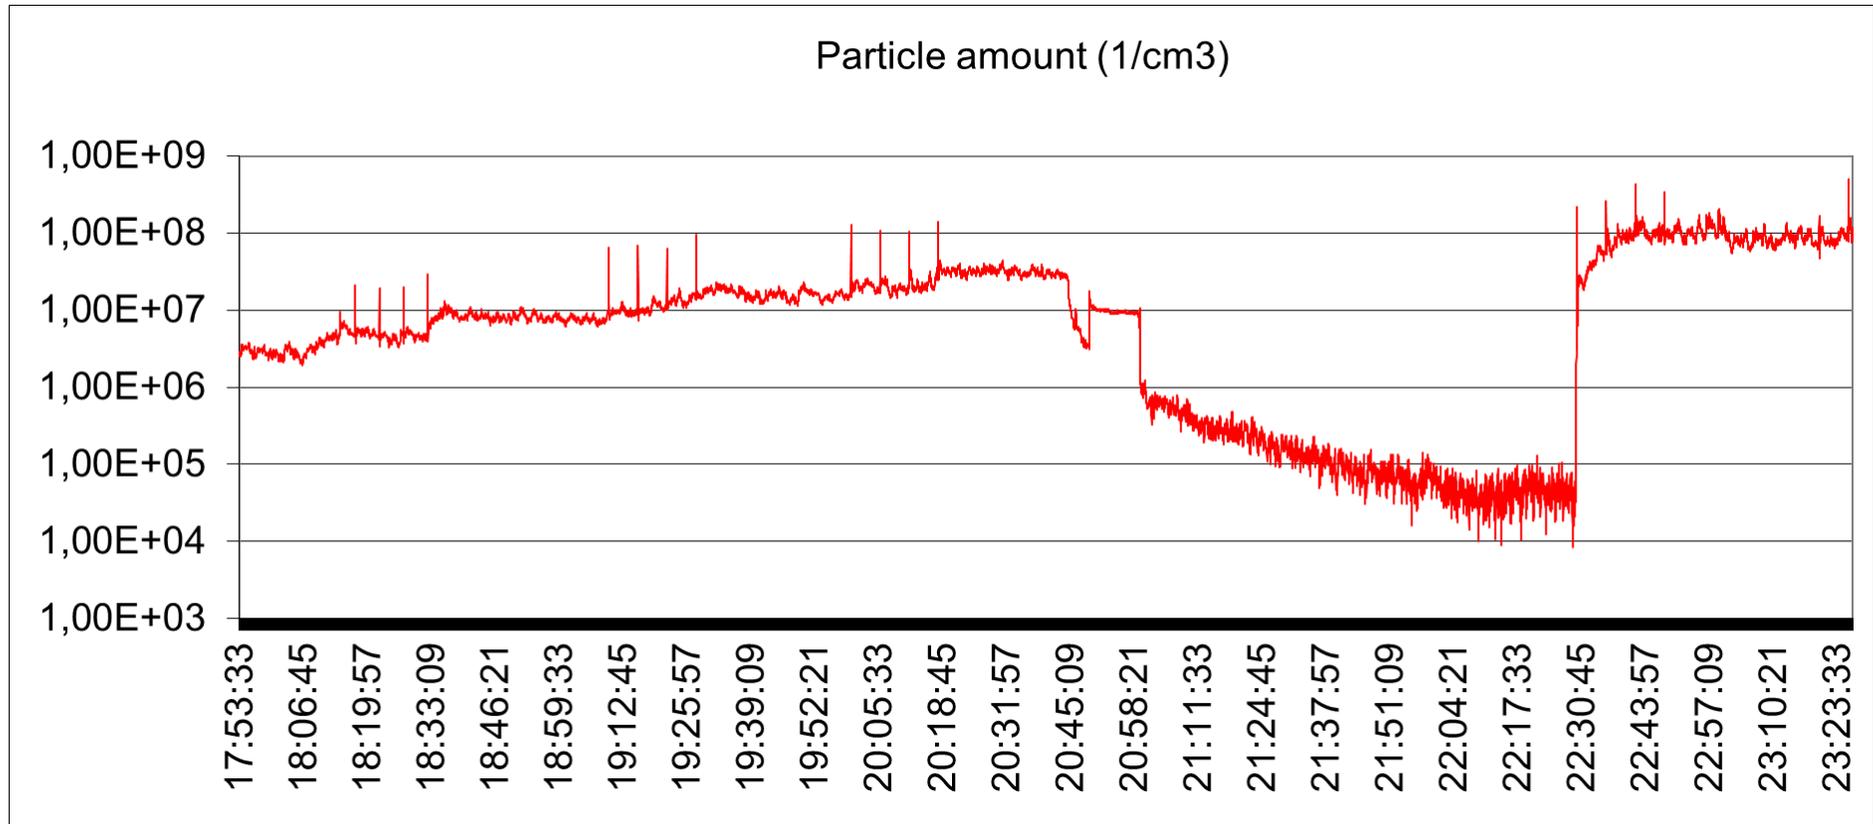

## Comparison of on-line ammonia FTIR (diluted) and off-line method

## Particle measurement with ELPI (Electrical Low Pressure Impactor) equipment

## Particle measurement with ELPI equipment

VTT's current measurement capabilities related to thermochemical conversion processes

## Sustainable syngas R&D and analytics

- Tar analysis (tar protocol)
- On-site measurement campaigns
- On-line gas sampling and analysis
- Special impurity analytics
  - Hydrogen impurities
  - Sulphur, ammonium nitrogen and cyanide compounds
- Gas analytics related to catalyst development
